Appendix B – Precipitation

Kruskal-Wallis Test (from Walpole & Myers, 1993, and Maidment, 1993)

The Kruskal-Wallis test is a non-parametric test (introduced in 1952 by W.H. Kruskal and W.A. Wallis) which tests the equality of means of independent samples, to identify whether they are from the identical populations.

The samples sets are combined, and ranked in ascending order. These ranks then replace the actual data in each sample. An "H" statistic is found through the following equation:

$$H = \frac{12}{n(n+1)} \sum_{i=1}^{k} \frac{R_i^2}{n_i} - 3(n+1)$$

Where R_i is the sum of ranks for each sample, n_i is the number of data in each sample, and n is the total number of data in all the samples combined.

This is then compared to the 95% Chi squared distribution, with degrees of freedom, and defines whether the null hypothesis (sample sets are from the same population) is met or not. If H falls within the critical region greater than the Chi squared variable ($H>X_\alpha^2$), then the null hypothesis is rejected at that significance, otherwise, the null hypothesis is accepted.

Mann-Kendall Test (from Haan, 2002, and Helsel & Hirsch, 2002)

The Mann-Kendall Test is a non-parametric test that identifies trend, typically with time, in a series of data. Each value ($X(t)$) is compared to every other later value in the series ($X(t')$), and the comparisons are ranked as either positive or negative, and placed in a matrix ($z(k)$). This is evident in the matrices presented in Tables B-1.2.

$$z(k) = 1 \quad if \;\; X(t) > X(t')$$
$$z(k) = 0 \quad if \;\; X(t) = X(t')$$
$$z(k) = -1 \quad if \;\; X(t) < X(t')$$

The sum of the matrix values (S), the variance of the matrix ($V(S)$), and the probability of trend (U_c), are then calculated, using the following equations.

$$V(S) = \frac{1}{18}\left[n(n-1)(2n+5)\right] \qquad u_c = \frac{S+m}{\sqrt{V(S)}}$$

The value of m is +1 if S is negative, and -1 if S is positive, and n is the number of data values.

The U_c value is then compared to the z-table. If U_c is less than the corresponding z value, there is no significant trend in the data.
